

Important: Surescripts is gradually implementing Multi-Factor Authentication (MFA) for individual customers, beginning in November 2023 and continuing through February 2024. **Please note that no action is required from your end until you encounter the MFA setup screen upon logging into Workbench.** Until activated for your specific account, you will not have the option to set up multi-factor authentication.

About Multi-factor Authentication

To keep private health information secure, Surescripts has implemented multi-factor authentication. In addition to your login ID and password, you will also need to enter a passcode to sign in. This passcode can be generated by any authenticator application that supports the use of time-based one-time passwords (TOTPs).

What do I need to get started?

Use an existing authenticator app

You can use an authenticator app that you already have installed on your mobile device for work or other secure access.

-OR-

Download a new authenticator app

Visit your mobile device's app store and search for "TOTP authentication" in the search bar. From the results, choose and download an authenticator app to your mobile device. If you are uncertain about which app to download, Surescripts recommends that you check with your company's IT department about which app they recommend employees use for business purposes.

Popular authentication apps:

- [Google Authenticator](#)
- [Microsoft Authenticator](#)
- [Duo](#)

The information and opinions contained in this document are provided "as is" and without any warranties or guarantees. Add New Account

Open the authenticator app and follow the prompts to add a new account.

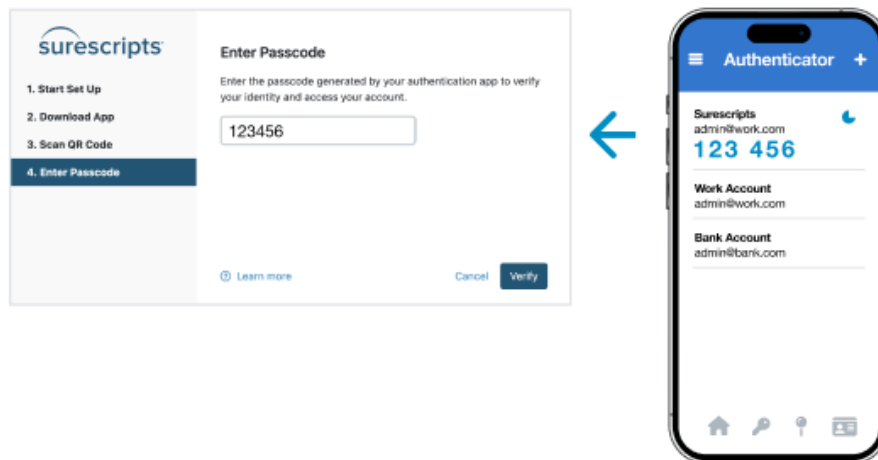

Scan QR Code

Using your authenticator app, scan the QR code **on the set-up screen** that appears after login to create a Surescripts account. Follow any prompts required after scanning the QR code.

Enter Passcode

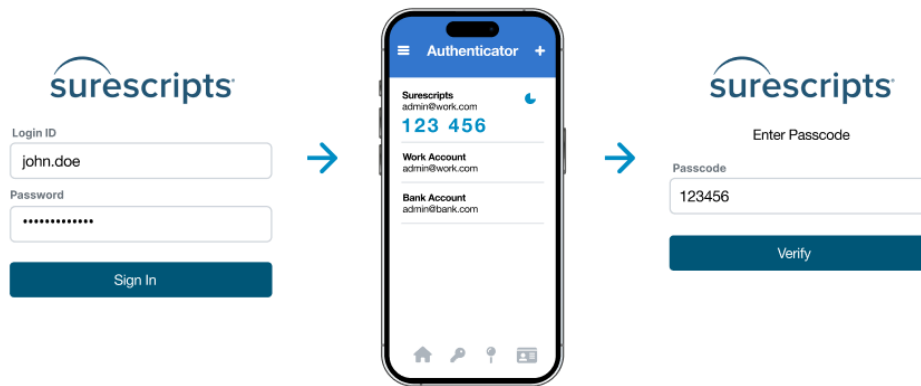

After scanning the QR code, enter the passcode generated by your authentication app to confirm your identity and access your account.

Passcodes are time sensitive, only allowing you to use them for a short time.

Setup Successful

After setting up multi-factor authentication, the next time you log in to Surescripts, you will be prompted to enter a passcode. This passcode is generated by the authenticator app you used during the initial set up for multi-factor authentication.

Frequently Asked Questions

1. Where is multi-factor authentication (MFA) required?

It will be required for any Surescripts tool that provides access to PHI and PII. Workbench production, portals, and gateways will require MFA. Workbench staging and Resource Community will NOT require MFA.

2. What if I do not have a mobile device?

If you do not have a mobile device, you can download and install a desktop time-based one-time password (TOTP) authenticator app.

3. What if I am restricted from installing an authenticator app on my device?

Contact your company's IT department about which app they recommend employees use for business purposes.

4. What apps are supported?

You can use any app that supports time-based one-time passwords (TOTP). Some popular TOTP apps include [Google Authenticator](#), [Microsoft Authenticator](#), and [Duo](#). Search for “TOPT authentication” apps using your mobile device app store. Be sure you are downloading a reputable TOTP application. If your TOTP app has adds or is requesting payment, delete the app and download a different one.

5. Can I use an authenticator app that's already being utilized for another website account?

Yes, if the app is a time-based one-time password (TOTP) authentication app, you can use one that you already have installed on your mobile device. Some popular apps include Google Authenticator, Microsoft Authenticator, and Duo.

6. What should I do if my passcode fails?

1. Try entering your passcode again to ensure that you are using the most recent one generated by your authentication app. Keep in mind that these passcodes have a brief expiration time, so make sure to use them promptly.
2. If the problem persists, or you are still unable to log in, do not hesitate to contact Surescripts customer support.

7. How often do I need to log in using multi-factor authentication?

Once every 10 hours unless:

- You are using a private/incognito browser
- You switch to a different computer
- You switch to a different browser
- You clear your cookies on your browser
- More than one person with a different account is using the same computer to log in.

8. I have two different logins; do I need to complete multi-factor authentication setup twice?

Yes, once for each account.

9. Is it possible to use a shared user account with multi-factor authentication?

No, shared accounts are not compatible with multi-factor authentication.

10. Is there any way to skip multi-factor authentication?

No, Multi-factor authentication is mandatory. However, you might be able to access Surescripts

services via your organization's credentials, often known as Single Sign-On (SSO) or Federated ID. If this is of interest to your organization, please contact your Surescripts account manager about Federated Identity Management with Surescripts.

11. When will MFA be required?

Beginning on March 4, 2024, MFA will be required for access to Workbench production, portals, and gateways.
